

“As the CFI of our advanced helicopter training centre here in Hobart (Australia) I wish to simply state that the two Flyit simulators we have been operating for the past three years have been an outstanding success. In particular with respect to lifting the overall flying standard of our IFR trainees.

We are producing a significantly higher quality product at a lower cost to the customer. The Bell 206 simulator harmonises well with our Bell 206 basic IFR trainer, as does the AS355 F1 simulator with our (AFCS equipped) AS355 F1 multi engine IFR trainer.

An added bonus is the higher level of IFR & night currency training we can offer to our company pilots who service the Tasmanian Government’s helicopter rescue contract with (SP-IFR equipped) BK117 and AS355 helicopters.

What Flyit does quite well is to customise the cockpit of the simulator very closely to the actual training helicopter cockpit. This allows the trainee to develop positive habit transfers quickly as he or she steps from simulation to real flight.”
